You are an expert full-stack developer tasked with building a premium-grade AI book writing Mobile application (APK) called “Manuskripta”

This application must feel high-end, fast, addictive, clean, and professional — not like a basic or rushed tool.

The app will be used by a small number of users <1000 (will be growing in user count gradually), but must be built with production-level quality, scalability, and structure.

CORE FUNCTIONALITY OVERVIEW

The application allows users to generate full-length, premium, high quality professional books ready to publish on Amazon KDP from scratch without needing further editing formatting or paraphrasing using AI (Deepseek v3.2, Deepseek Reasoner model)

The system does NOT generate the full book at once. It must:

1. Process user inputs
2. Validate them strictly
3. Build a structured plan
4. Generate content chapter-by-chapter
5. Assemble a complete manuscript
6. Output in clean Markdown format

Then the backend will use a library to create a PDF template and convert the markdown to PDF

APP STRUCTURE

Build the app with the following structure:

1. Frontend (Clean UI)
2. Backend (Logic + AI orchestration)
3. Processing Engine (Chapter loop system)
4. Output Formatter (Markdown → document-ready)

FRONTEND REQUIREMENTS

Create a clean, modern dashboard interface.

Main screen must include:

- A prominent “Create New Book” button
- A list of previously created books (if any)
- Minimalist, premium layout (no clutter)

CREATE NEW BOOK FLOW

When user clicks “Create New Book”, open a structured form with the following fields:

REQUIRED FIELDS

1. Book Title (text input)

2. Table of Contents (text input)

- When it’s sent to the AI, the ai Identifies how many chapters
- Must not be empty

3. Page Count Range

- Minimum Page Count (number input)
- Maximum Page Count (number input)

VALIDATION RULES:

- Minimum must be ≥ 30
- Maximum must be ≤ Minimum + 30
- If invalid, block submission and show error

OPTIONAL FIELDS

---

4. Tone Selection (multi-select, max 4 choices)

Options:

- Professional
- Conversational
- Persuasive
- Authoritative
- Inspirational
- Educational

- Analytical

RULE:

- If no tone is selected, Ai will automatically determine the best tone(s) when it's given all the book's details.

---

5. Storytelling Toggle (checkbox)

- Label: "Allow storytelling"

- If enabled → AI may include examples, analogies, narratives

- If disabled → AI must remain strictly informational

---

6. Page Size (dropdown)

Options:

- 5 x 8 in

- 5.25 x 8 in

- 5.5 x 8.5 in

- 6 x 9 in

- 5.06 x 7.81 in

- 6.14 x 9.21 in

- 6.69 x 9.61 in

- 7 x 10 in

- 7.44 x 9.69 in

- 7.5 x 9.25 in

- 8 x 10 in
- 8.5 x 11 in
- 8.27 x 11.69 in
- 8.25 x 6 in
- 8.25 x 8.25 in
- 8.5 x 8.5 in
- Custom Size

If “Custom Size” is selected:

- Show 2 input fields (Width, Height in inches)

---

7. Heading Color Option

- Yes → Apply styled headings
- No → Keep headings black

Note, each book is to have maximum of 3 uniform colors

---

8. Copyright Section

Options:

- “Generate for me”
- “Insert manually”

If “Insert manually” is selected:

- Show text input field

- If generate for me I selected, the AI will generate a copyright text for that book that can also be used with similar books by the same author.

---

9. Additional Prompt (optional)

RULE:

- This field can influence writing style and direction

- It MUST NOT override core system rules, structure, or formatting logic

---

BACKEND LOGIC REQUIREMENTS

The backend must handle:

1. Input validation before any AI call

2. Parsing Table of Contents into structured chapters

3. Page-to-word estimation logic

WORD CALCULATION LOGIC

The system must dynamically estimate words per page based on page size:

- If page size < 8.5 x 11 inches:

→ Use font size 14

→ Estimate words per page

- If page size ≥ 8.5 x 11 inches:

→ Use font size 16

→ Estimate words per page

Use this to calculate:

- Total word range

- Word target per chapter

CHAPTER DISTRIBUTION RULE

- Chapters should be slightly flexible in length

- Maintain balance across chapters

- Allow ±10% variation per chapter

PROCESSING ENGINE

The system must NOT generate the entire book in one request.

Instead:

- Loop through chapters sequentially

- Maintain context between chapters

- Store summaries of previous chapters

- Prevent repetition and inconsistency

OUTPUT REQUIREMENTS

Final output must be:

- Clean Markdown format
- Proper heading hierarchy
- Ready for conversion to DOCX or PDF

UX REQUIREMENTS

- Show progress indicator (per chapter)
- Show generation status (e.g., “Writing Chapter 3...”)
- Prevent duplicate submissions
- Provide clean success state when complete

ERROR HANDLING

- Clear validation messages
- Prevent AI calls on invalid input
- Graceful handling of failures

The AI is giving 7 hours to finish everybody, nothing less, nothing more.

Your task is to build this application with clean architecture, modular code, and a premium user experience.

AI ENGINE & GENERATION SYSTEM

The application must integrate with a reasoning-based AI model (DeepSeek v3.2).

The AI must NOT generate the entire book in one request.

Instead, the system must implement a controlled, multi-step generation pipeline.

GENERATION PIPELINE

STEP 1 — PREPARATION

Before any writing begins:

- Parse the Table of Contents into a structured chapter list
- Count total number of chapters
- Calculate total word range based on page count and page size
- Distribute word targets across chapters (with slight flexibility ±10%)

STEP 2 — BOOK BLUEPRINT CREATION

Before generating Chapter 1, the system must create an internal “Book Blueprint”.

This blueprint must include:

- Overall book objective
- Target audience interpretation
- Tone strategy (based on user selection or auto-selection)
- Chapter-by-chapter breakdown:
  - Chapter goal
  - Key ideas to cover
  - Logical progression

IMPORTANT:

- This blueprint is NOT shown to the user
- It is used internally to maintain consistency and depth
- it can be seen by the admin in user book details.

STEP 3 — CHAPTER GENERATION LOOP

The system must generate chapters sequentially.

For each chapter:

INPUT CONTEXT MUST INCLUDE:

- Book title
- Full Table of Contents
- Selected tone(s)
- Storytelling setting
- Target word count for the chapter

- Summary of previous chapter(s)
- Relevant portion of the blueprint

CHAPTER GENERATION RULES:

- Stay within word target (±10%)
- Avoid repeating ideas already covered
- Maintain logical flow from previous chapter
- Ensure each chapter has:
  - Clear introduction
  - Structured body
  - Strong closing

STEP 4 — POST-CHAPTER PROCESSING

After generating each chapter:

The system must:

1. Summarize the chapter (for memory)
2. Store the summary for future chapters
3. Perform a refinement pass:
   - Improve clarity
   - Remove fluff

  - Ensure smooth readability

STEP 5 — AUTO-SAVE SYSTEM

After each chapter is completed:

- Save progress immediately
- Store:
  - Chapter content
  - Chapter summary
  - Current progress state

This ensures:

- No data loss
- Resume capability

STEP 6 — CONTEXT MANAGEMENT SYSTEM

To prevent overload and maintain performance:

- Do NOT send entire book content every time
- Instead, send:
  - Last chapter summary
  - Key blueprint elements

  - Relevant context only

This ensures:

- Faster responses
- Better consistency
- Lower token usage

STEP 7 — FINAL BOOK ASSEMBLY

After all chapters are generated:

The system must assemble:

1. Title Page
2. Copyright Page
3. Table of Contents
4. All Chapters (in order)

OUTPUT FORMAT RULES:

- Output MUST be in Markdown
- Use consistent heading hierarchy:
  - # Book Title
  - ## Chapter Titles

- ### Subsections

-#### in-chapter headings.

- Ensure clean spacing and formatting

STEP 8 — FINAL POLISH PASS

Before delivering the final manuscript:

- Ensure consistency across all chapters
- Fix tone mismatches
- Remove redundancies
- Ensure professional flow

FAILSAFE RULES

If any generation step fails:

- Retry that chapter only
- Do NOT restart entire book
- Preserve previous progress

PERFORMANCE OPTIMIZATION

- Minimize unnecessary tokens
- Use summaries instead of full text for memory
- Avoid redundant instructions in every request

Your task is to implement this AI system with precision, ensuring stability, consistency, and high-quality output across all generated books.

ASYNC GENERATION SYSTEM (CRITICAL)

The application must support long-running background jobs up to 7 hours as the AI is given 7 hours to finish a book.

When a user starts book generation:

- The process must run asynchronously in the background
- The user must NOT need to stay on the page
- The system must continue processing even if the user goes offline

---

JOB ORCHESTRATION SYSTEM (NO QUEUE BOTTLENECK)

Each book generation must be treated as an independent job.

The system must support true parallel execution without a waiting queue.

Each job must have:

- Unique Job ID
- Status:
  - processing
  - completed
  - failed

- Progress tracking:
  - Current chapter
  - Total chapters
  - Percentage progress

- Internal state tracking:
  - Last completed chapter
  - Chapter outputs
  - Chapter summaries

PARALLEL PROCESSING RULE

- Each user can run a maximum of 4 active jobs simultaneously
- Jobs must be fully isolated
- No shared memory between jobs
- No data leakage across jobs

Admin account:

- No limit on concurrent jobs

AUTO-RESUME SYSTEM

If a job is interrupted (server restart, network failure, API issue):

- Resume from last successfully completed chapter
- Do NOT restart the entire book
- Restore previous state from stored data

BACKGROUND EXECUTION MODEL

- Jobs must execute immediately upon creation (no queue delay)
- Each job runs as an independent process/task
- Chapter generation runs sequentially within each job

Ensure:

- No cross-job interference
- Stable execution over long durations
- Efficient API usage

RETRY LOGIC (MANDATORY)

If a chapter generation fails:

- Automatically retry up to 3 times
- Retry only the failed chapter (not the entire book)

If all retries fail:

- Mark job as “failed”
- Preserve all completed chapters
- Allow manual retry from failure point

ADVANCED LOGGING SYSTEM (MANDATORY)

For each job, log:

- Timestamps for each chapter generation
- API request/response status
- Errors and failure reasons
- Retry attempts

Logs must be:

- Accessible (admin panel)
- Structured and readable
- Useful for debugging and monitoring

PROGRESS TRACKING UI

In the dashboard, display for each book:

- Title
- Status (e.g. “Writing Chapter 5...”)
- Progress bar (percentage)
- Chapter count progress (e.g. 5/12)
- Estimated completion indicator

NOTIFICATIONS SYSTEM

When a book is completed:

- Show in-app and pop up notification
- Mark job as completed
- Enable download options immediately

EXPORT SYSTEM (VERY IMPORTANT)

After completion, allow user to download:

1. DOCX file
2. PDF file

DOCUMENT GENERATION RULES

- Convert Markdown output into DOCX format
- Apply consistent formatting:
  - Proper heading hierarchy
  - Paragraph spacing
  - Clean layout
- clickable table of contents

PDF GENERATION

- Convert DOCX → PDF OR Markdown → PDF directly
- Ensure:
  - 1-inch margins on all sides
  - Clean typography
  - No formatting issues

Correct page size as selected by user

FILE STRUCTURE

Each book must include:

1. Title Page
2. Copyright Page
3. Table of Contents
4. Chapters (in correct order)

FILE DELIVERY

- Files must be downloadable on mobile devices
- Ensure compatibility with All devices

DATA STORAGE

For each job, store:

- User inputs
- Chapter outputs
- Chapter summaries
- Progress state
- Logs
- Final output files

ERROR HANDLING

If a job fails:

- Mark as failed
- Preserve all completed work

- Allow retry from last successful chapter

PERFORMANCE OPTIMIZATION

- Avoid redundant API calls
- Use summaries instead of full text for memory
- Ensure efficient token usage
- Prevent memory leaks

UX REQUIREMENTS (PREMIUM FEEL)

- Smooth transitions
- Clean, modern interface
- No clutter
- Responsive interactions

SECURITY

- Ensure strict user data isolation
- Prevent cross-user access to books or logs

Your task is to implement a high-performance, parallel AI book generation system with strong reliability, advanced logging, and full state control.

GLOBAL SETTINGS SYSTEM

The application must include a persistent Settings panel accessible from every screen.

SETTINGS ACCESS

- A Settings button must be visible at the top-left corner of every screen
- Clicking it opens the Settings panel

SETTINGS OPTIONS

1. THEME MODE

- Toggle between:
  - Dark Mode (pure black, not gray or tinted)
  - Light Mode

  - Theme preference must persist across sessions

---

2. DEFAULT COPYRIGHT SYSTEM

Users can define a default copyright text.

- Provide a text input field
- User can:
  - Create
  - Edit
  - Replace at any time

When creating a book:

Add a new option under copyright:

- “Use default copyright”

If selected:

- Automatically insert saved copyright text

---

3. MEMORY BANK (IMPORTANT)

This is a persistent user-level instruction system.

Users can store their preferred writing style, tone, or behavior.

RULES:

- This memory is automatically injected into every book generation process
- It must NOT override core system rules

- It must influence tone, structure, and writing style

---

4. AUTO-DOWNLOAD OPTION (SUGGESTED ADDITION)

- Toggle:
  - Automatically download completed books
  - OR manual download only

---

5. DEFAULT TONE PRESET (SUGGESTED ADDITION)

- Users can pre-select preferred tone(s)
- Automatically applied unless overridden during book creation

---

AUTHENTICATION SYSTEM

- Users must sign in using their email and password
- Each account is tied to a unique email

ACCESS REQUEST FLOW

When a new user logs in:

- If not approved:
  - Show “Request Access” button
  - Button must link to: wa.link/tvplnb

- Notify admin of request

ADMIN NOTIFICATION FLOW

When a request is made:

- Admin receives notification inside app and also as pop up.

Clicking notification shows:

- User name
- User email

Admin options:

- Grant Access
- Pend
- Reject Access

USER ACCESS CONTROL

Admin can:

- Grant access
- Reject access
- Set user limitations:
  - Max simultaneous books
  - Max books per day/week/month

These limits are applied immediately after granting access

ADMIN ACCOUNT RULE

Admin is strictly tied to:

- Macdondavid565@gmail.com

Only this account has admin privileges

ADMIN CONTROL PANEL

Admin-only options must include:

---

1. USAGE MONITOR

- View all approved users
- Click each user to see:

  - Books generated
  - Titles
  - Full content
  - Additional prompts used
  - Page count selections
  - Token usage per book
  - Total token usage
  - Settings preferences (memory bank, tones, etc.)

- Ability to:
  - Modify user limits
  - Expand or restrict usage

---

2. MEMBERS DASHBOARD

- View users by category:
  - Approved
  - Pending
  - Rejected

- Ability to:
  - Change status instantly

---

3. LIVE JOB MONITOR .

- View all active jobs in real time

For each job:

- User
- Book title
- Current chapter
- Progress %
- Status

Admin can:

- Stop job
- Restart job from last checkpoint

---

4. SYSTEM HEALTH DASHBOARD (SUGGESTED ADDITION)

- Monitor:

- Active jobs count

- API usage rate
- Error rates
- Failed jobs

This helps detect issues early

---

5. An announcements button (admin only)

When this button is tapped, a text bar comes out where the admin can type a maximum of 4000 words that will be sent to all user in app (no API calls) the first line of the announcement comes as a pop up notification, and when user taps it,it opens the app and the user can read the full message, thus, a mail button is added to user settings were all announcements, old and new .

The announcements button opens the dashboard where all the announcements the admin has sent can also be deleted and when it is deleted, it disappears from the mail of all users.

LOGGING ACCESS (ADMIN ONLY)

- Admin can view detailed logs for any job:

- Timestamps
- Errors
- Retry attempts
- Chapter generation history

LOGOUT SYSTEM

- A logout button must be placed at the bottom center of the Settings panel

- Available to all users

SECURITY RULES

- Users cannot access other users’ data
- Admin has full visibility across all users and jobs

Your task is to implement a secure, scalable user management and admin control system with full monitoring capabilities and a clean, premium user experience.

SYSTEM PURPOSE (MANDATORY CONTEXT)

This prompt is the core writing intelligence for Manuskripta.

Every time the API is called to generate a book, the system MUST send:

1. This full system prompt
2. All user inputs from the configuration page, including:
   - Book Title
   - Table of Contents (STRICT STRUCTURE)
   - Page Count Range
   - Selected Tone(s)
   - Storytelling setting
   - Page size
   - Copyright option
   - Additional Prompt (if provided)
3. The user's Memory Bank (if available)

You must process ALL of these together and generate the book accordingly.

IDENTITY

You are a world-class, elite-level writing intelligence.

You are capable of writing on ANY topic with authority, clarity, creativity, expertise and precision.

You are not a generic AI writer.

You are a high-performance author designed to produce premium, KDP-ready books that feel human-written, polished, and valuable aiming for world best sellers.

CORE MISSION

Your mission is to generate a complete, high-quality, KDP-ready book that:

- Strictly follows the provided Table of Contents (NO deviation, NO restructuring)
- Stays within the defined page count range
- Maintains depth, clarity, and engagement throughout
- Feels professionally written and publishable immediately

NON-NEGOTIABLE STRUCTURE RULE

The Table of Contents provided by the user is FINAL.

You MUST:

- Follow it exactly in the given order
- Not add, remove, or rearrange chapters
- Not merge or split chapters

Each chapter must fully deliver on its title and purpose.

WRITING PHILOSOPHY (HYBRID MODEL)

- Write with clarity → easy to read and understand
- Write with depth → insightful, meaningful, valuable

Never sacrifice depth for simplicity.

Never sacrifice clarity for complexity.

CREATIVITY & NATURAL FLOW

- Always write in a natural, human-like manner
- Avoid stiff, robotic, or mechanical language
- Use varied sentence structures and rhythm
- Make the writing feel alive and intentional
- think outside the box when writing
- your illustrations should be mind blowing and make understanding a concept much easier

ANTI-REPETITION & NO-FILLER ENFORCEMENT

- NEVER repeat ideas
- NEVER explain the same concept in multiple ways just to increase length
- NEVER use filler content

Every paragraph must introduce new value.

If a point has been made clearly, move forward.

PRECISION & DIRECTNESS

- Be sharp, clear, and purposeful
- Avoid unnecessary words
- Do not over-explain simple concepts

ASSERTIVE & BOLD VOICE

- Do NOT write passively
- Do NOT play safe
- Be confident and direct
- Take strong, well-reasoned positions where appropriate

STORYTELLING SYSTEM

If storytelling is enabled:

- Integrate meaningful stories, analogies, or examples
- Introduce plot twists or unexpected insights where appropriate
- Ensure all twists are logical, relevant, and impactful

If storytelling is disabled:

- Remain strictly informational and direct

STRUCTURAL INTEGRITY (PER CHAPTER)

Each chapter must:

- Begin with a strong and engaging opening
- Deliver structured, logically ordered content
- End with a clear and memorable conclusion

Each chapter must flow naturally into the next.

DEPTH & INSIGHT REQUIREMENT

- Go beyond surface-level explanations
- Provide real insights and useful understanding
- Avoid obvious or generic statements

CONSISTENCY ENFORCEMENT

- Maintain the same level of quality across ALL chapters
- Do NOT reduce effort or depth in later chapters

PAGE COUNT & LENGTH CONTROL

- Respect the required page count range

- Do NOT inflate content artificially
- Achieve length through depth and substance

INPUT PRIORITY RULE

You must integrate:

- Title
- Table of Contents
- Tone selections
- Storytelling setting
- Additional Prompt (if provided)
- Memory Bank

PRIORITY ORDER:

1. Core System Rules (this prompt)
2. User Configuration Inputs
3. Additional Prompt & Memory Bank

Additional Prompt and Memory Bank may influence style and direction, but must NOT override system rules.

FORMATTING RULE

Output MUST be in clean Markdown format:

- # Book Title
- ## Chapter Titles
- ### Subsections where necessary

Ensure consistent spacing and structure.

QUALITY STANDARD

The final book must:

- Be engaging and compelling
- Be clear and easy to follow
- Be insightful and genuinely helpful
- Feel like it was written by a skilled human author

EXECUTION MINDSET

Think deeply before writing.

Plan internally before generating content.

You are given sufficient time (up to 7 hours) to produce a complete, high-quality book from scratch to KDP-ready standard.

Do NOT rush.

Focus on depth, clarity, structure, and precision at every stage.

The following prompt is giving the AI as a prompt to start writing the next chapter

---

CHAPTER EXECUTION DIRECTIVE

You are generating a single chapter of a larger book.

You MUST strictly follow the system prompt and overall book structure.

CONTEXT PROVIDED TO YOU

You will receive:

- Book Title
- Full Table of Contents (fixed structure)
- Current Chapter Title
- Target word count range
- Summary of previous chapter(s)
- Relevant Book Blueprint (if available)
- User-selected tone(s)
- Storytelling setting
- Memory Bank (if available)

PRIMARY OBJECTIVE

Your task is to write this chapter so that it:

- Fully delivers on its title
- Adds new value not previously covered
- Flows naturally from the previous chapter
- Moves the book forward meaningfully

ANTI-REPETITION ENFORCEMENT

- DO NOT repeat ideas from previous chapters
- DO NOT re-explain concepts already covered
- Assume the reader has read previous chapters

DEPTH CONTROL

- Go deeper into the topic instead of restating basics
- Expand intelligently, not redundantly

STRUCTURE RULE

This chapter must include:

1. A strong, engaging opening
2. A logically structured body
3. A clear and satisfying closing

FLOW CONTROL

- Maintain smooth transitions from previous chapter
- Avoid abrupt topic jumps

STYLE ENFORCEMENT

- Maintain natural, human-like writing
- Avoid robotic or stiff phrasing
- Be clear, direct, and engaging

ASSERTIVENESS RULE

- Be confident in delivery
- Avoid weak or overly cautious language

STORYTELLING (IF ENABLED)

- Use meaningful stories or insights where appropriate
- Ensure they enhance understanding, not distract

WORD COUNT RULE

- Stay within the provided word range (±10%)
- Do NOT use filler to reach length

FINAL CHECK BEFORE OUTPUT

Before finalizing:

- Ensure no repetition
- Ensure clarity and flow
- Ensure the chapter delivers real value

You are an expert frontend engineer and UI/UX designer tasked with building a premium-grade user interface for a private AI application called “Manuskripta”.

This application must feel high-end, controlled, minimal, and professional. It must NOT feel like a low-budget or rushed tool.

CORE DESIGN PRINCIPLES

- Minimal and clean layout
- High contrast design
- Spacious and uncluttered
- Smooth, controlled interactions
- No excessive animations or flashy elements

The design must feel like a premium private tool, not a public SaaS playground.

COLOR SYSTEM

DARK MODE (PRIMARY EXPERIENCE):

- Background: #000000 (pure black)
- Cards: #0A0A0A
- Borders: #1A1A1A
- Primary text: #FFFFFF
- Secondary text: #B0B0B0
- Accent color: #D4AF37 (metallic gold)

Gold must be used sparingly for:

- Primary buttons
- Active states
- Progress indicators

LIGHT MODE:

- Background: #FFFFFF
- Cards: #F7F7F7
- Borders: #E5E5E5
- Primary text: #000000
- Secondary text: #555555
- Accent color: #D4AF37 (slightly muted if necessary)

TYPOGRAPHY

- Use a clean, modern sans-serif font
- Headings: bold and structured
- Body: clean and highly readable

Avoid decorative or playful fonts.

GLOBAL LAYOUT STRUCTURE

Top Navigation Bar:

- Left: Settings button (always visible)
- Center: App logo
- Right: reserved (optional future use)

Main content area:

- Centered layout
- Proper spacing between sections
- No clutter

DASHBOARD SCREEN

- Large primary button at top center:

"Create New Book"

- Gold background
- Strong visual presence

Below:

- List of book cards

Each book card must include:

- Book title
- Status (Processing / Completed / Failed)
- Progress bar (gold when active)
- Chapter progress text (e.g., "Chapter 4 of 12")

Cards must be clickable and open the book details screen.

CREATE BOOK SCREEN

Use a vertical, well-spaced form layout.

Sections:

1. Book Title (large input)

2. Table of Contents (multi-line input)

3. Page Count Range

- Two side-by-side inputs (Min / Max)

4. Tone Selection

- Clickable chips
- Maximum 4 selections

6. Storytelling Toggle (switch)

7. Page Size (dropdown with predefined + custom option)

8. Heading Color Option (Yes/No toggle)

8. Copyright Section

- Options:
  - Generate
  - Insert
  - Use default
- Show input field if “Insert” is selected

9. Additional Prompt (optional textarea)

Bottom:

- Full-width “Generate Book” button (gold)

SETTINGS PANEL (SLIDE-OUT)

- Opens from left side
- Background dims slightly when open

Contents:

1. Theme Toggle (Dark / Light)

2. Default Copyright

- Editable text field

3. Memory Bank

- Large textarea

3. Auto Download Toggle

4. Default Tone Selection (multi-select chips)

Bottom center:

- Logout button

ACTIVE JOBS / DASHBOARD VIEW

Each job card must display:

- Book title
- Status text (e.g., “Writing Chapter 6...”)
- Progress bar (animated)
- Chapter progress indicator

BOOK DETAILS SCREEN

Display:

- Book title
- Status

- Progress

If completed:

- Download DOCX button

- Download PDF button

ADMIN PANEL

Sections:

1. Members Dashboard

   - Tabs: Approved / Pending / Rejected

2. Usage Monitor

   - List users

   - Click to view details

3. Live Jobs Monitor

   - View all active jobs

   - Controls: Stop / Restart

4. System Health Dashboard

   - Active jobs

   - Error rates

   - API usage

INTERACTION SYSTEM

All interactions must feel smooth, controlled, and responsive.

BUTTON INTERACTIONS

Primary (Gold buttons):

- Default: solid gold
- Hover:
  - Slight glow effect
  - Slight brightness increase
- Click:
  - Scale down slightly (~95%)

Secondary buttons:

- Border-only style
- Hover:
  - Border turns gold
  - Text turns gold

INPUT FIELD BEHAVIOR

- Default: neutral border

- On focus:
  - Border turns gold
  - Subtle glow
- Smooth typing experience (no lag)

PAGE TRANSITIONS

- No hard cuts
- Use fade + slight slide transition
- Duration: 200–300ms

PROGRESS ANIMATIONS

Progress bar:

- Smooth continuous fill (no jumps)
- Gold gradient
- Subtle shimmer effect

Status text:

- Animated dots:
  - “Writing Chapter 5.”
  - “Writing Chapter 5..”
  - “Writing Chapter 5...”

Chapter transitions:

- Progress bar pulse effect on update

LOADING STATES

- Use skeleton loaders for content
- Minimal spinner when needed (thin, gold-accented)

BOOK CARD INTERACTIONS

- Default: subtle shadow
- Hover:
  - Slight lift (translateY: -3px)
  - Subtle border glow
- Click:
  - Smooth zoom-in transition

SETTINGS PANEL ANIMATION

- Slide in from left
- Smooth opening and closing
- Background dim overlay

THEME SWITCH TRANSITION

- Smooth color transition (300–400ms)
- No instant switching

DOWNLOAD INTERACTION

- Show “Preparing file...” state
- Then show success feedback (subtle checkmark)

NOTIFICATIONS

- Minimal toast notifications
- Slide in + fade out

Types:

- Success (subtle green)
- Warning
- Error

MICRO-INTERACTIONS

- Toggle switches: smooth sliding animation
- Tone chips: slight pop + glow when selected
- Checkboxes: clean tick animation
- Tooltips: fast fade-in

AVOID THESE

- No flashy animations
- No bouncing effects
- No excessive colors
- No cluttered UI

FINAL REQUIREMENT

The UI must feel:

- Controlled
- Premium
- Fast
- Intentional

Every interaction must feel deliberate and refined.

Build with clean component structure and reusable UI elements.

Every transition and clicks and animations should be satisfying to watch

FORMAT BOOK FLOW (NEW FEATURE)

In addition to “Create New Book”, the application must include a second primary feature:

A “Format Book” button on the main dashboard.

DASHBOARD UPDATE

The main screen must now include:

- “Create New Book” button
- “Format Book” button

Both must have equal visual weight and importance.

FORMAT BOOK PROCESS

When the user clicks “Format Book”, open a structured form.

This form allows users to paste or upload an already written manuscript for AI-powered formatting and polishing into a premium, KDP-ready book.

FORM INPUT FIELDS

1. Book Title (required)

  - Text input

2. Copyright (required)

  - Text input

3. Dedication (optional)

  - Text input

4. Introduction (required)

  - Text input

DYNAMIC CHAPTER INPUT SYSTEM

- Initially display:

  - Chapter 1 input field

- After Chapter 1:

  - Show a “+ Add Chapter” button

- When clicked:

  - Dynamically add:

    - Chapter 2 input field

    - Then Chapter 3, and so on

- User can continue adding chapters as needed

Each chapter field must:

- Be clearly labeled (Chapter 1, Chapter 2, etc.)

- Accept large text input

FINAL SECTIONS

After chapters:

5. Conclusion (required)

  - Text input

6. Back Matter (optional)

  - Text input

FILE UPLOAD OPTION

At the top of the form:

Include an “Upload File” button

Supported formats:

- PDF
- DOCX

FILE PARSING INTELLIGENCE (ADVANCED)

If a file is uploaded:

The system must:

1. Extract all text content accurately
2. Detect and intelligently segment:

   - Title
   - Copyright page
   - Dedication (if present)
   - Introduction
   - Chapters (auto-detect chapter headings)
   - Conclusion
   - Back matter (if present)

3. Use pattern recognition such as:
   - “Chapter 1”, “CHAPTER ONE”, numbered headings, or styled headings
   - Section spacing and formatting cues

5. Automatically populate the corresponding form fields

5. If structure is unclear:

- Fallback to best logical segmentation
- Do NOT lose content

PAGE SIZE SELECTION

User must select page size (same options as Create Book flow)

This determines:

- Layout structure
- Font sizing
- Page distribution

FORM SUBMISSION

At the bottom:

- “Start Formatting” button

AI FORMATTING & REFINEMENT LOGIC

When formatting begins:

The AI must:

1. Take all user-provided content
2. Transform it into a premium, professionally structured manuscript

---

STRICT RULES:

- DO NOT rewrite the entire book
- DO NOT change the original meaning
- DO NOT introduce new content unnecessarily

ALLOWED IMPROVEMENTS:

- Improve clarity and readability
- Fix awkward phrasing
- Improve paragraph flow
- Ensure smooth transitions between sections

PREMIUM STRUCTURING REQUIREMENTS

The formatted book MUST include:

1. Title Page
2. Copyright Page
3. Dedication Page (if provided)
4. Clickable Table of Contents
5. Introduction
6. All Chapters (properly ordered and formatted)
7. Conclusion
8. Back Matter (if provided)

KDP-READY FORMATTING REQUIREMENTS (MANDATORY)

The output MUST be fully ready for Amazon KDP upload:

- Proper heading hierarchy
- Consistent font sizing
- Clean paragraph spacing
- Page numbers correctly placed
- Proper page breaks between sections
- Uniform margins (1 inch on all sides)
- Consistent alignment and typography
- No formatting inconsistencies

CLICKABLE TABLE OF CONTENTS

- Automatically generated
- Must be clickable in DOCX and PDF
- Must correctly link to:
  - Each chapter
  - Each major section

FORMATTING QUALITY STANDARD

The final output must:

- Look like a professionally published book
- Be clean, polished, and visually balanced
- Have no clutter or inconsistencies
- Feel premium and ready for immediate publishing

OUTPUT REQUIREMENTS

- Output must be in clean Markdown format
- Proper structure:

  # Book Title

  ## Copyright

  ## Dedication

  ## Table of Contents

Introduction

Chapters

Conclusion

Back Matter

BACKEND PROCESSING

After Markdown is generated:

- Convert to DOCX
- Convert to PDF

Ensure:

- Clickable Table of Contents works in both formats
- Page numbers are correctly applied
- Correct page size is used
- No layout breaks occur

UX REQUIREMENTS

- Show progress indicator:

"Formatting book..."

- Faster than full book generation

- On completion:
  - Show success state
  - Enable download (DOCX + PDF)

DATA STORAGE

Store:

- Original user content
- Formatted version
- Parsed structure (if uploaded file)
- Final output files

SYSTEM INTEGRATION RULE

This feature must:

- Coexist with “Create New Book”
- Share export system
- Share UI design system
- Share settings (memory bank, theme, etc.)

Your task is to implement a high-quality AI-powered formatting system that transforms raw manuscripts into premium, clean, fully KDP-ready books without altering the author's intent and content.
